

INTEGRATED SYSTEMS

Bimech offers customized solutions for the dosing, high containment and handling of powders in the production process.

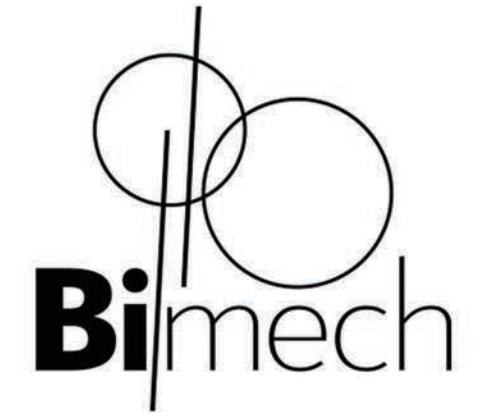

Infact the focus of Bimech is about the management of the flow of powders and granules, such as active ingredients, excipients, bulk and finished products through the production process.

Thanks to technological innovations in automation, Bimech guarantees the efficiency of its machines according to the standards of the new 4.0 industry. The experiences gained, working on multiple types of different processes, allows Bimech to analyze a complex production process, draw an optimized flow from it and translate it into a line of machines that, working integrated with each other, perform complementary functions in the ways and times marked by the process itself. For us, multidisciplinary is not a concept, but a set of skills that we share with our customers to manage their production process, verifying the performance and obtaining a quality level that is reliable over time.
